

THE FOLLOWING ARE STEPS ON HOW TO SET UP YOUR EMAIL ADDRESSES FOR CLASS.

You must create six (6) email addresses for the entire Cloud Computing training.

Four (4) emails will be used to register your Amazon Web Services account (AWS).

One (1) email will be used to register your Microsoft Azure Cloud account (Azure).

The last email will be used to register your Google Cloud account (GCP).

Here is the process/suggestion on how you can set up your email addresses to reflect the different environments we will teach you about during the training.

You must create an email address with your first and last name on **Gmail.com or Hotmail.com or AOL.com, Mail.com, or Yahoo.com**.

Below are the sample email guidelines:

If your first name is Nouella, your Last name is **Nahvoma**, and you have a Middle name, **Kristina**. Your email should look like the example below.

1. First Name: Nouella – Last Name: Nahvoma, Middle Initial: K

Email should be registered in any of the following formats – For Amazon Web Services (AWS):

1. Nouellakn.Devtest@yahoo.com or any other free email provider indicates your intention to use this email to register your (Development and Testing Environment) account in Amazon Web Services. You could use an underscore (_) or (-) or a number (3) in between, and the goal is to have DevTest attached to the email address as an indication of your intention.
1. 2. Nouellakn.Staging@hotmail.com or any other free email provider - This indicates your intention to use this email to register your (Staging Environment) account in Amazon Web Services. You could use an underscore (_) or (-) or a number (2) in between, and the goal is to have Staging attached to the email address as an indication of your intention.
1. Nouellakn.Sharedservices@gmail.com or any other free email provider indicates your intention to use this email to register your (Shared Services

Environment) account in Amazon Web Services. You could use an underscore (_) or (-) or a number (4) in between; the goal is to have Shared Services attached to the email address as an indication of your intention.

1. 4. Nouellakn.Prodacct@gmail.com or any other free email provider - This indicates your intention to use this email to register your (Production Environment) account in Amazon Web Services. You could use an underscore (_) or (-) or a number (4) in between, and the goal is to have Production or Prod attached to the email address as an indication of your intention.

For Google Cloud (GCP):

1. Nouellagcpdev@gmail.com - This email must be created on Gmail.com. Google Cloud uses gmail.com email as a single sign-on to access their Google Cloud Platform.

For Microsoft Azure Cloud (Azure):

1. Nouella.azuredev@outlook.com - This email must be created on www.Outlook.com. Microsoft AZURE Cloud uses hotmail.com or outlook.com email to access their Microsoft Azure Cloud Platform as a single sign-on.

A single sign-on means you do not have to sign up for a new account since you already have an email account with each cloud company's email providers.

Note: It's okay if you don't have a middle name. Your first and last name is good enough. You could also use your nickname to create the emails, and it doesn't matter. It's all about what identifies you, so you don't struggle to determine what names you used to create your accounts.

Note: Kindly Keep the Password the same across all email accounts. This will ease any troubleshooting event that might occur during training. Ensure to use upper-case, lower-case numbers, and special characters for your password. Example: DeltaMark58@\$

Note: Save all this information to a Notepad or Microsoft Word document, do not write it on any piece of paper.

File Name when you "Save As": Email Addresses for Training

File Location, select your folder as Desktop
